## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 9,10,17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Moore 3,462,982.

Moore teaches a steering wheel lock comprising a bar 14/28 with one-way ratchet teeth 26, a tubular body 24 to telescopically receive the bar, and a key actuated pawl means to engage the ratchet and disengage to release the bar upon key actuation (col. 2, lines 66-72).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moore '982 in view of Sholes 871,047.

Art Unit: 3676

Sholes teaches a solid round lock bar 4 having one-way ratchet teeth 5, telescopically received in a tubular round body member 1 having a spring biased pawl member, wherein the pawl has a flat stop surface to engage the stop surface of the ratchet teeth and an inclined surface to engage the inclined bearing surface of the ratchet teeth. It would have been considered an obvious matter of design choice to modify the flat bar and pawl of Moore by providing a round bar and body member and multi-surfaced pawl member as taught by Sholes to enhance the locking security of the device as desired.

### ***Response to Arguments***

5. Applicant's arguments filed 9/22/04 have been fully considered but they are not persuasive. As set forth above, the patents to Moore and Sholes are deemed to teach all of the claimed structure of the instant invention. Applicant's arguments regarding the disadvantages of the Moore device on page 1 of his remarks are not persuasive, since the structure claimed is taught by Moore. Furthermore, Moore clearly teaches a telescoping movement between the body and bar, contrary to Applicant's arguments. Also, applicant's arguments that Moore does not teach the body being integral with the lock housing are not relevant since this limitation is not claimed. Accordingly, claims 9-17 stand finally rejected.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 3676

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
